

TaskForge PM Software — Q1 2026 Quarterly Business Report

Prepared for: Executive Leadership Team

Executive Summary

TaskForge closed Q1 2026 with strong North America and Europe performance and rapidly accelerating adoption in Latin America. Latin America revenue has nearly tripled over the last four quarters from a small base, driven by demand from mid-market agencies in Brazil and Mexico. Leadership is evaluating a formal market-entry investment into Latin America, including Portuguese and Spanish localization, regional payment support, and a dedicated in-region customer success function.

Regional Highlights

North America remains the largest region by revenue with steady growth and improving churn. Europe continues stable mid-single-digit growth. Latin America grew revenue by roughly 170% over the last four quarters and now has the highest NPS of any region, though churn remains elevated relative to mature markets as the customer base is still stabilizing post-onboarding.

Latin America Market Notes

Factor	Assessment
Market size (SAM)	Est. \$140M ARR opportunity over 5 years across BR, MX, CO, AR
Competitive landscape	Fragmented; no dominant regional PM tool, mostly generic global players
Regulatory	Brazil requires local data hosting for enterprise customers (LGPD)
Localization needs	Portuguese and Spanish UI, local payment rails (Pix, boleto, OXXO)
Estimated entry cost	\$950K in Year 1 (localization, compliance, regional sales hire)

Risks to Consider

Entering Latin America would require dedicated engineering time for LGPD-compliant local data hosting, which could delay planned North America feature releases. Currency volatility in Argentina and Brazil adds forecasting risk. Elevated regional churn suggests onboarding and support processes may need further localization investment beyond language alone.

Financial Snapshot (see attached KPI dataset for full detail)

Company-wide Q1 2026 revenue was approximately \$10.88M across all regions, with Latin America contributing roughly 7% of total revenue while representing under 10% of the active user base, consistent with an early but fast-growing customer segment in-region.
